

Interior Airflow

Air Flow (side view)

Air Flow (front view)

The fresh food evaporator fan forces air through the evaporator into the fresh food compartment. Air from the evaporator can also pass through the pantry room damper/heater assembly to the deli drawer, through the fresh food compartment, and return to the evaporator. The damper/heater assembly is controlled by the main control board. When open, the damper allows the chilled air from the fresh food evaporator to move into the deli drawer. Air returns from the fresh food compartment to the fresh food evaporator via two return vents located on the top left and right sides of the evaporator cover.

The freezer evaporator fan forces air through the evaporator into the freezer compartment. An additional ice room fan circulates air into and returns air from the ice room via plastic conduits embedded in the cabinet foam insulation. Air returns from the freezer compartment to the freezer evaporator via two return vents located on the bottom of the evaporator cover.
